

Assia Medical – Surgery & Interventional Medicine

The “Assia Medical” center for interventional medicine and surgery is the realization of the shared vision of Israel’s finest surgeons, designed to provide advanced private medical services on the highest professional level of a private hospital, with the convenience of private care and at a cost affordable to all.

The center incorporates the leading physicians in Israel, all senior surgeons and department managers in Israel’s leading hospitals, is founded on the global model of private surgical services, offers a complete support system in all medical and logistical aspects of surgery. The center provides personal, comprehensive, high quality and accessible services, so that at no point is the patient alone – not before, during, or after the surgery.

All surgical operations offered in the field of internal surgery are performed at the center privately and at the highest medical level, using strict ethical and professional standards and the most modern equipment, the most skilled medical teams and advanced methods that are the latest word in Western surgery.

Among the fields in which the center provides treatment: endoscopic surgery, urology, gastric surgery, oncological surgery, obesity medicine, breast medicine specialization, endocrinology, gastroenterology, proctology, interventional cardiology, diagnostic and therapeutic heart catheterization, peripheral blood vessel catheterization and virtual catheterization.

Breast health

“Assia Medical” also provides a unique breast clinic for women’s health at the highest professional level in Israel, using the “one stop shop” model – performing all diagnostic examinations for early discovery and identifying of breast cancer diseases and providing the most advanced and innovative treatment by first-rate experts in Israel – initial response and complete and all-inclusive follow-up by all attending personnel in order to obtain the optimal and best diagnosis and treatment for the disease.

Obesity

ICBS – the Center for Obesity Treatment – is a daughter group of “Assia Medical”, established by the finest physicians and professionals in obesity medicine in Israel. The center was established in light of the dramatic increase in obesity over the past few years in Israel and the world, and the growing need for reliable medical information assembled in one institution that will provide the variety of advanced treatments available today in modern medicine. MLBI is designed, therefore, to provide complete and comprehensive medical services for treating and coping with the obesity problem, including the most advanced surgical solutions to date.

“Assia Medical” patients receive the most professional treatment offered today in the field of surgery: along with first-rate surgeons each patient receives personal, comprehensive and quality service, as well as human and medical response 24 hours a day, 365 days a year. Being a center that incorporates the finest surgeons, it is committed to providing surgical services at the highest level of medical, ethical and administrative professionalism. As part of this policy, patient files receive medical collaboration / consultation by the center’s staff, and one of the main advantages of the medical services provided by a center of specialists is the ability to submit cases for joint

physician consultation as needed, and the capability to collaborate with experts in the surgical procedure itself when necessary.

The Founders

The center founders are Professor Micha Rabau, Dr. Amir Szold and Professor Abraham Czerniak. All three are considered first-rate senior surgeons in Israel, and have also been serving for many years as department and unit managers in large public hospitals.

Szold, Rabau and Czerniak are not only considered excellent and humane professionals, but also hold senior positions in professional medical organizations and unions, and are included year after year in the list of “The Best Physicians in Israel” published annually in Israel and the world.

The International Department

The “Assia Medical” international department accepts dozens of patients each year from all over the world in various fields of medicine. The logistical and medical teams are experienced in processing medical information, receiving patients, accompanying and supporting them throughout the treatment and following it, and if necessary, also contacting and consulting the attending physician in the patient’s country of origin.

“Assia Medical” - Services:

The center provides its patients with a variety of complementary services that minimize inconvenience and maximize security for the patient in the medical procedure they are about to undergo:

The center’s team assists its patients in everything related to **prompt coordination of consultation appointments** with the best surgeons in the country, **significant shortening of the usual waiting period for surgery**, as well as **advanced pre-surgical services**: a pre-surgical unit and a preliminary meeting with the anesthesiologist prior to the operation, the possibility of performing all pre-surgical examinations in one place, a coordinating surgical nurse who can be consulted during all stages of the medical treatment – before, during, and after the surgery.

The patients at “Assia Medical” are never alone - not before, during, or after the surgery.
